Functions Performed:

This installation is a pool of punch-card equipment and is operated for four Registers (Divisions) of the Office of Collection and Dissemination. Each register has a sufficient volume of work to justify its own installation. However, the pool was established to obtain the best utilization of equipment and personnel.

The major function of this installation is to maintain and operate four separate types of punch-card indexes of the written and graphic informational content of a large volume of documents received in CIA; and upon request to search for and recall references to the indexed information for use in solving intelligence problems.

Facsimile equipment designed and built to Agency specification is used to automatically produce a tape containing the bibliographic statement and/or abstract of the documents represented by index cards selected as the result of a search. The bibliographic statement and abstract is reproduced by multilith processes on each index card prior to the key punching operations.

The procedures followed are highly specialized and unique.
